

The protocols of deparaffinization

Before deparaffinization, array slide should be kept in room temperature for 60 min or heated in over at 60°C for 20 min in a horizontal position.

1. Immerse array slide in xylene for 10min, repeat once in new xylene for 10 min.
2. Immerse array slide in 100% ethanol for 5 min.
3. Immerse in 95% ethanol for 5 min.
4. Immerse in 70% ethanol for 5 min.
5. Dry slide in room temperature.
